Project Title	Hair Stylist Booking Web Application
Project Description	**About the company:** BrazWebDes is a web and mobile development company that specializes in creating custom digital solutions for businesses of all sizes. We aim to empower local businesses by providing them with user-friendly and innovative web and mobile applications, enhancing their digital presence and driving growth. **About the project:** This project involves creating a comprehensive online booking system for a hairstylist. Customers will book appointments through a website and a mobile app and receive email confirmations and updates (on create, reschedule, or cancel). The solution also includes establishing a visual identity, such as logo, color palette, and core branding elements to present a professional and consistent image for the business across web and mobile. Additionally, the website and mobile app will include a Portfolio & Testimonials section where clients can submit feedback on their experience (with admin approval and consent capture) and, optionally, a Blog for posts such as style tips and announcements to improve discoverability and engagement.
Problem/ Opportunity Assessment *	*Please describe current state problem/opportunity that describes the nature and extent of the problem (factual, quantified, concise), or that outlines a chance for advancement or progress.*
	1. The hairstylist currently has no online booking system; appointments via DMs/phone are time-consuming and increase the risk of double-booking and no-shows. 2. By implementing an online booking system, the hairstylist can automate appointment scheduling, improve customer experience, and free up valuable time. This will also provide the business with data that can be used for future marketing efforts. 3. There is no structured place to showcase work or collect client feedback; testimonials with photos can increase trust and conversion.
Desired Project Outcomes/ Requirements*	*Define how this project shall address a business need, e.g. the business problem or opportunity described above; describe what the beneficiary must be able to do / receive from the solution*
	1. Online Booking System: A fully functional web and mobile booking flow that

		shows only available time slots and confirms appointments via email.
	2.	Admin Dashboard: A dashboard for the hairstylist to easily manage bookings, view upcoming appointments, and track customer history. This would streamline their workflow, making it easy to modify or cancel appointments as needed.
	3.	Customer Profile System: A customer account system where clients can register and store their appointment history, preferences, and personal details. This could improve the customer experience by offering tailored services in the future.
	4.	Mobile App: A companion app for clients to browse services/portfolio/blog and book, reschedule, or cancel appointments, with email confirmations and updates.
	5.	Portfolio & Testimonials: Gallery of haircut photos and client feedback submission (form), with admin review/approval and consent logging before publication.
	6.	Blog (optional if time): Create/edit/publish posts (cover image, categories/tags, basic SEO fields) to support SEO and client engagement.
Key Deliverables to be produced by students*	*Define the boundaries of work that you expect to receive from the students effort (vs. internal effort)*	
	1.	Development of the Online Booking System: We will develop a fully functional online booking system that allows customers to select available times and book appointments. This will include calendar integration and appointment confirmation features.
	2.	Design of the Admin Dashboard: We will create an admin dashboard where the hairstylist can view and manage customer bookings, modify appointments, and track customer data.
	3.	Creation of Branding and Visual Identity: We will design a professional logo, color scheme, and visual assets for the hairstylist's business to ensure a cohesive brand identity on the website.
	4.	Portfolio & Testimonials Module, photo upload/management, client feedback form, admin approval workflow, consent capture.
	5.	Blog Module (if included), post CRUD, publish/draft state, basic SEO fields (title/description/slug).
	6.	Mobile App Prototype: Core client flows (browse services/portfolio/blog; book/reschedule/cancel with email confirmations).
Desired Start Date	September 15, 2025	
Desired End Date	March 27, 2026
